

Masum Kajidwar

Software Engineer (Java Backend)

Email: Masumkajidwar01@gmail.com

Mobile: +91 – 95618 88504

Bengaluru (India)

Java Backend Developer with **4.1 years** of practical experience delivering **scalable backend services** using **Java, Spring Boot, Hibernate**, and **RESTful architectures**. Hands-on in developing **microservice-based systems** with efficient data handling across **MySQL and MongoDB**. Experienced in **event-driven processing** using **Kafka** and deploying applications on **AWS (EC2, S3)**. Strong focus on **application optimization, fault analysis, and clean design principles** to ensure long-term maintainability. Adept at writing **structured, efficient code**, collaborating within **Agile teams**, and delivering **secure, business-aligned backend solutions** that support high availability and performance.

TECHNICAL SKILLS

- **Programming & Frameworks:** Core Java, MultiThreading, Spring Boot, Spring MVC, Spring WebFlux (Basics), Hibernate, JPA, JSP, Data Structure Algorithm
- **Architecture & Design:** Microservices Architecture, RESTful APIs, API Versioning, MVC, SOLID Principles, Design Patterns
- **Databases & Caching:** MySQL, MongoDB, Redis, JDBC, Query Optimization
- **Messaging & Streaming:** Apache Kafka, Event-Driven Architecture, Asynchronous Workflows
- **Cloud & Deployment:** AWS (EC2, S3), Docker, CI/CD, Jenkins
- **Version Control & Build Tools:** Git, GitHub, Maven
- **Testing:** JUnit, Mockito
- **Monitoring & Logging:** Log4j, Logback, SonarQube, Application Monitoring
- **Development Practices:** Agile, Scrum, Performance Optimization, Root Cause Analysis
- **Tools & IDEs:** IntelliJ IDEA, Eclipse, STS, Swagger/ OpenAPI, JIRA, Confluence, Postman

EXPERIENCE

- **Software Engineer** | [TapQwik Software Pvt. Ltd. – Bengaluru, India] | JAN 2023 – Present
- **Software Engineer Trainee** | [TapQwik Software Pvt. Ltd. – Bengaluru, India] | APRIL 2022 – DEC 2022

PROJECTS

- **Project: LG E-Commerce Platform | Java Backend**
 - Developed a scalable **e-commerce backend system** for LG products, supporting product listing, smart search, category filtering, cart handling, real-time inventory, and secure checkout flow.
 - Implemented core backend modules for **catalog management, pricing rules, offers, cart updates, order processing, payments**, and user sessions using **Java, Spring Boot, Hibernate, and MySQL**.
 - Designed **clean and high-performance REST APIs** to ensure smooth integration with frontend applications and external services.
 - Created efficient **JPA/Hibernate entity mappings** for products, categories, inventory, and orders to maintain data integrity and consistency.
 - Improved application performance through **query optimization, Redis caching, pagination**, and reduced payload responses.
 - Applied strong **input validation, exception handling, and security checks** to enhance system reliability and user safety.
 - Wrote **unit and integration tests** using JUnit and Mockito to minimize defects and ensure stable releases.
 - Collaborated with **UX, QA, and business stakeholders** to refine requirements, resolve issues, and deliver features within timelines.
 - Maintained **technical documentation**, API definitions using Swagger, and workflow references to support onboarding and future upgrades.

➤ **Project: Trivago - Hotel Booking Application | Java Backend**

- Developed a scalable **hotel reservation backend system** supporting hotel search, room availability, pricing rules, booking flow, cancellations, and customer management.
- Implemented backend components for **hotel listings, room inventory, dynamic pricing, booking lifecycle, payments**, and user sessions using **Java, Spring Boot, Hibernate, and MySQL**.
- Designed **high-performance RESTful APIs** to handle search filters, date-based availability, and booking requests with seamless frontend integration.
- Created optimized **JPA/Hibernate relationships** for hotels, rooms, rates, bookings, and customers to maintain transactional accuracy.
- Improved response times using **query tuning, pagination, Redis caching**, and efficient data serialization.
- Implemented **validation, exception handling, and secure access controls** to ensure reliable and safe booking operations.
- Added **unit and integration tests** with JUnit and Mockito to validate business logic and reduce production defects.
- Worked closely with **product, QA, and frontend teams** to refine features, resolve issues, and deliver stable releases on schedule.
- Maintained **API documentation** using Swagger and created technical references to support future enhancements.

ROLES and RESPONSIBILITY

- Worked as a **Java Backend Developer** applying **MVC architecture** to build clean, modular, and maintainable server-side applications.
- Developed and supported enterprise platforms including **LG E-Commerce Platform** and **Hotel Booking** using **Java, Spring Boot, Hibernate, and JPA**.
- Designed and implemented **microservice-based solutions** with REST APIs to improve scalability, fault isolation, and system resilience.
- Built structured backend layers (**Controller, Service, Repository**) to handle business logic, data access, and API communication efficiently.
- Implemented **automated testing strategies** using JUnit, Mockito, and Postman to improve coverage and reduce regression issues.
- Applied **logging, monitoring, and code quality checks** using Log4j, Logback, and SonarQube to maintain production stability.
- Collaborated with **developers, QA, and delivery teams** using Git/GitHub, JIRA, and daily Agile ceremonies to ensure timely releases.
- Followed **Agile, Scrum, and test-driven principles** to deliver reliable, scalable, and high-quality backend systems.

EDUCATION

- **B.Tech (CSE) | P. R. Pote Patil College of Engineering and Management | Maharashtra, India**

CERTIFICATE

- Java Development Course

SOFT SKILLS

- | | |
|-------------------|----------------------|
| • Problem-Solving | • Innovative Thinker |
| • Team Work | • Time Management |
| • Adaptability | • Creativity |
